

EZ LOCK™ ANVIL COVERS

For Rotary Die Cutting

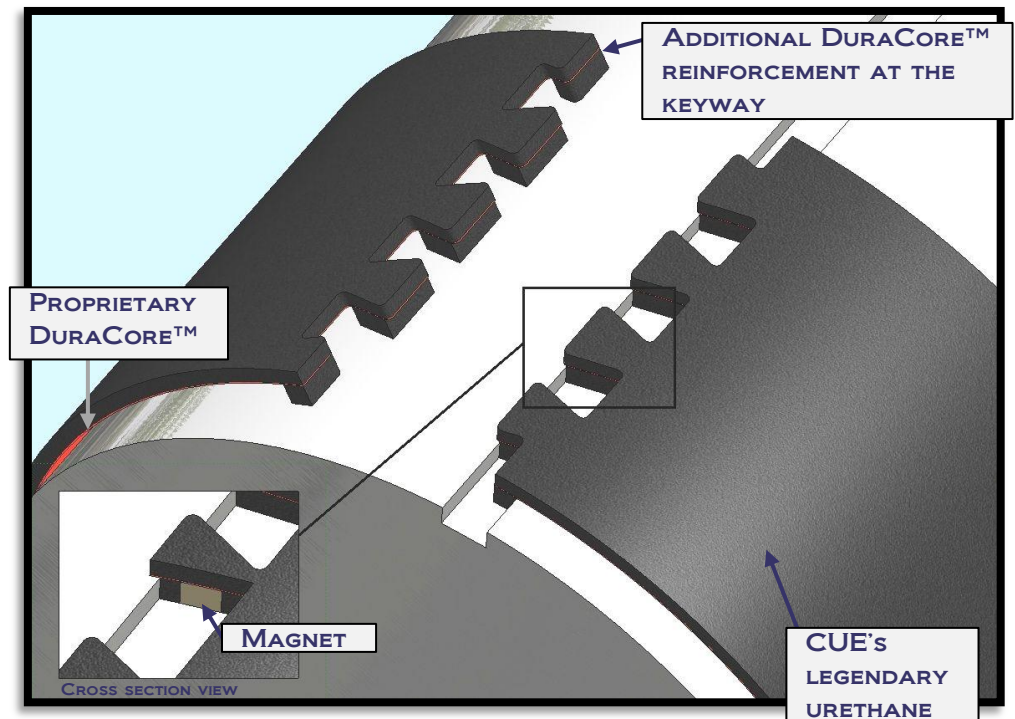

- **Easy to install. . . Easy to rotate. . . Easy to use**
- **Boltless, magnet-assisted installation**
- **Reinforced with our proprietary DuraCore™ backing**
- **Reduced weight & operator-friendly design promote safety**
- **Excellent cutting and scoring performance**
- **C.U.E.'s legendary urethane compound for maximum cover life**
- **Available in standard width, dual width, and custom width**
- **Competitively priced**

EZ LOCK™ ANVIL COVERS

For Rotary Die Cutting

EZ Lock™ Design Advantages

Easy to Install and Rotate -
EZ Lock™ uses **MAGNETS** to firmly hold the first end of the cover in the keyway while the locking end of the cover is tapped into place.

Safer and easier to use

EZ Lock™ covers are significantly lighter than traditional designs and require no bolts for installation. They can be installed in either rotation direction.

Improved cut and score quality

EZ Lock™ covers feature a proprietary backing – DuraCore™ – that helps the cover maintain its fit even under the toughest die cutting conditions. The extra-reinforced keyway area helps to eliminate the soft spot that can occur while cutting over the keyway with other designs.

Maximum anvil cover life

EZ Lock™ design advantages combine with C.U.E.'s proprietary urethane formulation to maximize the longevity of the covers. Fast, simple cover rotations can be performed more frequently, further adding to the covers' life.
