

KENBRAID CARRIER ROPES

Kenbraid Premier is a high temperature, quality impregnated filament nylon rope. Applied to each thread by the Kenyon developed method, the improved impregnation gives greater protection to the fibres of the rope and an excellent surface for gripping the paper tail. The unique hollow braided construction resists flattening under normal operating tension, further enhancing its threading efficiency and ease of splicing. If extra resistance to elongation is required, an option is available in filament polyester, specifically designed for wet conditions.
